

NURSING: PN-LPN | ADN-RN | RN-BSN

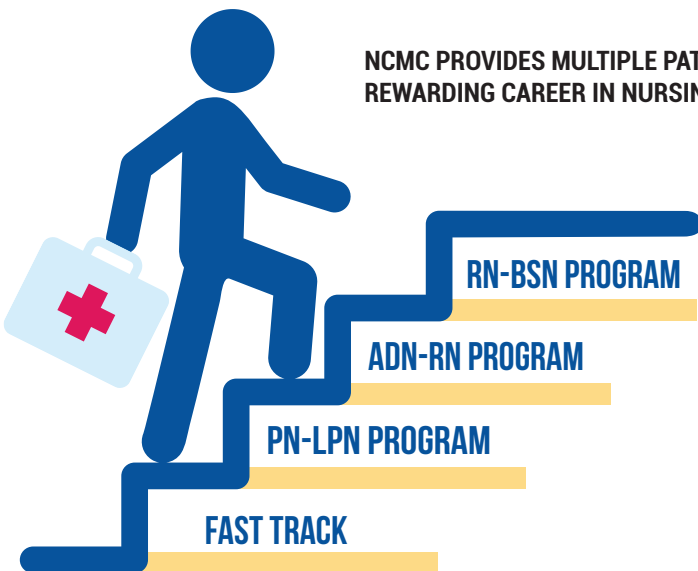

FORGING FUTURES
TOGETHER
NORTH CENTRAL MICHIGAN COLLEGE

To meet demand, health care providers are constantly looking for well trained, qualified professionals to care for patients. Nursing careers are personally and professionally rewarding, and opportunities vary according to job responsibilities, patient groups, professional settings and educational requirements.

North Central's nursing program utilizes a combination of classroom, clinical and lab experience to provide students a hands-on educational experience.

NCMC PROVIDES MULTIPLE PATHS TO A REWARDING CAREER IN NURSING.

CAREER OPPORTUNITIES

- Nurse Practitioners
- Registered Nurses
- Acute Care Nurses
- Licensed Practical Nurses
- Critical Care Nurses

PRACTICAL NURSE CERTIFICATE (PN-LPN)

The **PN-LPN program** prepares graduates to begin practice as entry-level licensed practical nurses upon successful completion of the NCLEX-PN exam. LPNs are

valued members of the health team who practice under the supervision of registered nurses, providing direct care for patients with acute and chronic conditions.

The program is limited to 40 students per cohort, with one cohort starting every year in January. Cohorts run full time from January through December to complete three consecutive semesters of nursing coursework (Winter, Summer and Fall).

ASSOCIATE DEGREE IN NURSING (ADN-RN)

North Central's **ADN-RN program** prepares graduates to sit for the NCLEX-RN exam, which they pass at rates above the state and national average. RNs often work independently

to develop and implement patient care plans in a variety of health care settings. They have more responsibilities and can provide a more advanced level of patient care than LPNs.

This program is limited to 48 students per cohort and includes a competitive application process. Cohorts start every Fall and run for two years with four semesters of full-time nursing coursework.

BACHELOR OF SCIENCE IN NURSING DEGREE (RN-BSN)

North Central's partnership with Davenport University provides NCMC nursing graduates with a structured pathway to earning a Bachelor of Science in Nursing degree (BSN).

Davenport University's BSN completion program is designed for graduates of North Central's three-year Associate Degree in Nursing (ADN) program* as well as other registered nurses seeking to continue their education. The NCMC-Davenport partnership allows North Central nursing graduates to earn their BSN during a fourth year spent locally, but as Davenport students. Because the program content is delivered online with some components taking place on North Central's campus, registered nurses can continue working while completing their last year of BSN education.

This project is being supported, in whole or in part, by federal award number SLFRP0127 awarded to The State of Michigan by the U.S. Department of the Treasury.

JUMPSTART YOUR HEALTH CARE CAREER WITH A FAST TRACK PROGRAM:

North Central's Fast Track career programs result in valuable, industry-specific certifications designed to meet regional workforce demands and employer requirements. Fast Track programs are offered in a variety of health care concentrations, including medical assistant and patient care technician. Programs range in duration from 4 – 24 weeks and include externship placement and networking opportunities with employers.
